LISTING OF CLAIMS

The following is a complete list of all claims in this application.

1. (Previously Presented) A method for fabricating a field emission display, comprising:

forming a cathode electrode on a substrate;

forming an emitter, comprising a carbon-based material, on the cathode electrode;

depositing an emitter surface treatment agent on the substrate to cover the

emitter after forming the emitter;

hardening the emitter surface treatment agent; and

the carbon-based material contained in the emitter.

removing the hardened emitter surface treatment agent from the substrate for exposing

2. (Previously Presented) The method of claim 1, wherein the step of forming the emitter further comprises:

printing a paste, comprising the carbon-based material, on the cathode electrode; and heat-treating the printed paste at a temperature lower than a complete-baking temperature for the paste.

- 3. (Previously Presented) The method of claim 2, wherein the paste is printed by a screen-printing process using a metal mesh screen.
- 4. (Original) The method of claim 1, wherein the carbon-based material is selected from the group consisting of a carbon nanotube, graphite, and diamond.

Application No.: 10/087,741 Reply dated August 16, 2006

Response to Office Action of June 16, 2006

5. (Previously Presented) The method of claim 1, wherein the emitter surface treatment

agent is deposited by a spin-coating process.

6. (Original) The method of claim 1, wherein the emitter surface treatment agent is

hardened by a heat-treatment process.

7. (Previously Presented) The method of claim 1, wherein the emitter surface treatment

agent comprises a polyimide solution.

8. (Original) The method of claim 2, wherein the printed paste is heat-treated at the

temperature of about 350-430°C for about 2 minutes.

9. (Previously Presented) The method of claim 6, wherein the heat-treatment process

comprises placing the substrate deposited with the surface treatment agent on a hot plate

maintained at a temperature of about 90°C for about 20 minutes.

10. (Previously Presented) A method for forming a carbon-based emitter, comprising:

forming an emitter including a carbon-based material;

forming a surface treatment agent over the emitter after forming the emitter;

heating the surface treatment agent for forming a treatment film; and

removing at least a portion of the treatment film.

11. (Previously Presented) The method of forming a carbon-based emitter of claim 10,

wherein the carbon-based emitter is used in a field emission display.

Application No.: 10/087,741 Reply dated August 16, 2006

Response to Office Action of June 16, 2006

12. (Previously Presented) The method of forming a carbon-based emitter of claim 10,

wherein the surface treatment agent comprises a polymide solution.

13. (Previously Presented) The method of forming a carbon-based emitter of claim 10,

wherein the heating of the surface treatment agent is to a temperature of about 90°C.

14. (Previously Presented) The method of forming a carbon-based emitter of claim 13,

wherein the heating of the surface treatment agent is conducted for about 20 minutes.

15. (Previously Presented) The method of forming a carbon-based emitter of claim 10,

wherein the carbon-based material includes at least one of a carbon-nanotube, graphite, and

diamond.
